<https://www.linkedin.com/in/alexander-chubar/>

PROFILE

Unity Developer (MSc) with 1 year professional experience. Civil Engineering background brings a strong foundation in mathematics, physics, and hands-on experience with 3D and simulation software that I apply directly to software development. Passionate about solving technical challenges and game development. Seeking a full-time position where I can deliver impact and continue growing my expertise.

TECHNOLOGIES

- C#, C/C++ (proficient)
- Java (experienced)
- Unity, Unreal Engine 4/5
- libGDX, SDL, OpenGL
- Version control: Git
- AI integration (OpenAI, LLM)

EDUCATION

Master of Computer Science

Charles University Prague

2021 – 2024

Major: Visual computing and game development.

Master of Civil Engineering

Moscow State University
of Civil Engineering

2013 – 2019

Major: Construction of unique buildings and structures; strong background in mathematics, physics, engineering simulation (CAD, Matlab, Ansys)

WORK EXPERIENCE

Unity Developer

Aug 2025 – present

Freelance Unity 3D projects

Berlin, Germany, remote

- Negotiated project scope, timelines, and deliverables directly with clients, ensuring on-time delivery
- Designed and implemented a custom Unity 3D painting application featuring a custom undo/redo system and persistent save functionality
- Diagnosed and resolved URP rendering and shader issues, upgrading compatibility to the latest Unity version and restoring motion blur functionality
- Integrated and tested in-app purchasing system for a Unity Android app
- Developed and optimized a runtime 3D terrain editing tool with 12 instruments, achieving stable 60 FPS on low-end Android hardware

CRL

2025

<https://github.com/AIChubar/CRL>

Balatro-inspired roguelike slot game.

Unity - C#

- Implemented a configuration-driven slot backend supporting any number of reels and symbols, with payout accuracy verified across 10,000+ simulated spins
- Built customizable configuration-driven architecture using ScriptableObjects
- Developed a custom Unity Editor testing framework with a visual grid inspector, validating payout logic across 6 predefined grid configurations
- Applied observer pattern to decouple UI from gameplay state logic

GPT JRPG

2023 – 2024

<https://github.com/AIChubar/GPTJRPG>

GPT-driven JRPG created as part of a Master's thesis.

Unity - C# - OpenAI API - Python

- Generated and verified 30+ complete game worlds, each consisting of procedurally generated quests, dialogues, enemies, and descriptions via LLM APIs
- Integrated Python-based generation tools with a Unity application
- Designed prompt pipelines to generate structured game data, reducing token usage by ~20% per game world generation
- Implemented turn-based combat and gameplay state logic
- Evaluated LLM output reliability across 200+ structured generation attempts, achieving ~90% + parse-success rate

EXPERTISE

- Object-oriented programming
- Gameplay programming
- Modular architecture, clean code best practices
- Data-driven design
- Coroutines & async programming
- Design of UI logic

LANGUAGES

- English C1 (proficient)
- German A2 (basic)
- Russian (native)

Details Please

2023

<https://tk07.itch.io/details-please>

Management Game. (2023)

Unity - C#

- Implemented UI systems and input logic for management gameplay
- Developed agent-based task management systems
- Delivered the project end-to-end within a 48-hour game jam as part of a small team

Lords of Hatred

2023

<https://achubar.itch.io/loh>

Single-player Boss-Fighting Game.

Unity - C#

- Designed and shipped 3 boss encounters with distinct behavior trees
- Built UI systems for player progression and in-game shop
- Developed a centralized audio management system handling 15 sound effects and music tracks
- Designed maintainable architecture using ScriptableObjects and object pooling
- Created custom editor tooling and reusable gameplay components

Demons Fight Tactics

2022

<https://github.com/AIChubar/DFT>

Single-player Auto-Battler.

SDL - C++

- Developed a tactics game using SDL2, implementing the core game loop and UI logic
- Built modular components for AI behavior and upgrades
- Designed a combat resolution system with 4 distinct parameters driving combat outcomes

Flowerized

2021 - 2022

<https://acidgrowthgames.itch.io/flowerized>

3D Farming Simulator.

Unreal Engine 5 - C++

- Designed and implemented 20+ quests and 200+ dialogue lines supporting 3+ hours of gameplay
- Developed progression and interaction systems in C++ within Unreal Engine
- Collaborated in a multidisciplinary development team

Construction Engineer

2019 - 2020

Full-time, JSC "31 GPISS"

Moscow, Russia

- Prepared comprehensive construction documentation, including drawings, specifications, and revisions
- Performed structural calculations and load analyses to ensure compliance with codes and safety standards
- Consulted on CAD solutions, optimizing workflows and deliverables using AutoCAD/Revit
- Conducted engineering simulation with MATLAB, ANSYS
